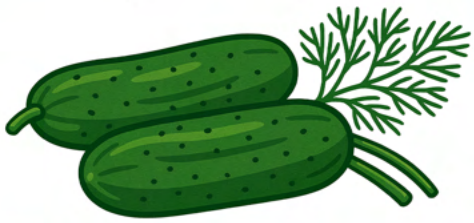
COMPANION PLANTING

TOMATOES + BASIL

A classic combo. Basil helps repel pests like aphids and hornworms, while making your tomatoes taste even better. Plus, they're delicious together in the kitchen.



CUCUMBERS + DILL

Dill is a great companion for cucumbers, attracting helpful insects like ladybugs and lacewings that eat cucumber pests. Plus, the pairing feels natural; cucumbers and dill are perfect partners in pickles.

CABBAGE + CELERY

Cabbageworms, be gone! Celery emits a strong scent that repels common brassica pests. Together, they form a nutrient-dense, low-spread ground cover that maximizes your garden rows.

PEPPERS + MARJORAM

(OR OREGANO)

Peppers benefit from aromatic herbs that deter pests and improve surrounding flavor profiles. Bonus: herbs don't compete for root space or water.

BEANS + SQUASH + CORN

THE "THREE SISTERS" METHOD

An indigenous planting technique where: Corn provides a stalk for beans to climb. Beans fix nitrogen in the soil. And squash shades out weeds and keeps the soil moist.
